

Trend-Scalp Algo Setup Guide

200 EMA + VWAP + CVD Trend-Following Strategy (Windows)

Ye ek ALAG algo hai pehle wale 'pivot ping-pong' se — ye trend-following approach use karta hai (mean-reversion nahi). Is guide mein zero se poora setup karwaya gaya hai.

IMPORTANT DISCLAIMER

Ye TESTNET (fake/demo money) ke liye hai. Financial advice nahi hai. Koi bhi strategy guaranteed profit nahi deti. Real capital lagane se pehle extensive testing aur apna khud ka risk assessment zaroori hai.

Strategy Kya Karti Hai — Ek Line Mein

Sirf tab trade leti hai jab TEEN cheezein ek saath ho: (1) price 200 EMA ke upar/neeche ho (trend confirm), (2) price VWAP ke paas pullback kare (entry zone), (3) CVD (buy/sell pressure) trend ki direction confirm kare. Teeno milne par hi entry leti hai — isliye kam trades aate hain, lekin har trade zyada quality wala hota hai.

What's in the ZIP

File	Purpose
START_HERE.txt	Quick reference — sabse pehle ye padho
config.py	Aapki API key/secret yahan jaati hai
trend_scalp_indicators.py	EMA, VWAP, CVD calculations (algo internally use karta hai)
trend_scalp_live.py	Main trading logic — ISI FILE KO RUN KARNA HAI

Step 1 — Python Install Hai Ya Nahi Check Karo

Agar aapne pehle wala (pivot) algo already setup kiya tha, Python already installed hai — seedha verify karo:

```
python --version
```

Agar "Python 3.x.x" dikhe, Step 3 pe jump karo. Agar error aaye "not recognized", neeche Step 2 follow karo.

Step 2 — (Sirf Agar Python Nahi Hai) Install Karo

<https://python.org/downloads/>

Download karke installer kholo. **"Add python.exe to PATH" checkbox ZAROOR tick karo** install karne se pehle, phir "Install Now".

Step 3 — Folder Banao Aur Files Daalo

1. Desktop par ek naya folder banao, naam do: **trend_scalp_algo**
2. Is ZIP ki saari files (config.py, trend_scalp_indicators.py, trend_scalp_live.py, START_HERE.txt) is folder mein daal do.

Teeno .py files EK HI folder mein honi chahiye, warna script chalegi nahi.

Step 4 — Required Packages Install Karo

Command Prompt kholo, is folder mein jaao:

```
cd Desktop\trend_scalp_algo
```

Phir ye chalao:

```
pip install delta-rest-client pandas requests
```

Agar pehle wale algo ke liye ye already install kiya tha, ye command turant "Requirement already satisfied" dikha degi — koi dikkat nahi, bas confirm ho jaata hai.

Step 5 — API Key Daalo

Agar aapke paas pehle se testnet API key hai (pivot algo ke liye banayi thi): wahi key/secret is naye config.py mein copy-paste kar do. Nayi key banane ki zaroorat NAHI hai — same testnet account, same key, dono algo ke liye chal jayegi.

Agar bilkul nayi key chahiye:

1. <https://testnet.delta.exchange/> par login karo
2. API Management -> Create API Key
3. "Read Data" aur "Trading" dono permissions ON karo
4. Key/Secret turant safe copy kar lo (Secret sirf ek baar dikhta hai)

config.py Mein Paste Karo

config.py ko Notepad se kholo, jahan likha hai:

```
API_KEY = "PASTE_YOUR_TESTNET_API_KEY_HERE" API_SECRET =  
"PASTE_YOUR_TESTNET_API_SECRET_HERE"
```

Apni actual key/secret se replace karo (quotes ke andar), Save karo (Ctrl+S).

NEVER apni API key/secret kisi chat, screenshot, ya kisi aur jagah share mat karna.

Step 6 — Algo Chalao

Command Prompt mein (usi folder ke andar):

```
python trend_scalp_live.py
```

Kya Dikhega

- "Loaded products: [...]" — sabhi 10 coins load ho gaye
- "Fee-aware minimum target: X%" — calculation confirm
- Har 60 second mein "Loop start" — coins scan ho rahe hain
- "No tradeable setup — staying flat" — jab tak EMA+VWAP+CVD teeno match na hon, ye normal hai
- Jab genuine setup mile: "Placing LIMIT order..." phir "OPENED [coin] [side]..."

Ye strategy PIVOT algo se zyada SELECTIVE hai — kam trades aayenge, kyunki teen conditions ek saath match hone chahiye. Lamba wait (ghanton tak) normal hai, especially agar market genuinely trending nahi hai.

Step 7 — Limit Order Ka Special Behavior

Ye algo pehle LIMIT order try karta hai (sasti maker fee, 0.04%). Agar 45 second mein fill nahi hota, khud hi cancel karke MARKET order try karta hai (zyada fee, 0.06%, lekin trade miss nahi hota). Console mein ye dikhega:

```
"Limit order not filled after 45s – cancelling and using market order."
```

Pehli trade jab bhi ho, Delta testnet website (Orders/Positions section) mein jaake MANUALLY verify zaroor karo ki order sahi tarah place/fill hui.

Step 8 — Do Algo Ek Saath Chalana (Optional)

Chahe to dono algo (pivot ping-pong aur trend-scalp) ALAG-ALAG Command Prompt windows mein SAATH-SAATH chala sakte ho:

```
Window 1: cd Desktop\delta_algo -> python live_testnet_algo.py
```

```
Window 2: cd Desktop\trend_scalp_algo -> python trend_scalp_live.py
```

Dono independent hain, apni-apni algo log files use karte hain (naam different hain), isliye clash nahi hoga.

Troubleshooting

Problem	Likely Fix
"python is not recognized"	Python dobara install karo, "Add to PATH" tick karke
"No module named delta_rest_client"	pip install delta-rest-client pandas requests dobara chalao
"No module named trend_scalp_indicators"	Confirm karo saari .py files ek hi folder mein hain
Bahut lamba "staying flat" chalta rahe	Normal hai — ye strategy selective hai, market trending hone ka wait karo
Limit order baar-baar fallback ho raha ho	Normal hai low-liquidity coins mein; console output dekho

Is guide ko banane wale samay, ye script live testnet ke against directly test nahi ki ja saki (no internet in the build environment) — pehli baar chalane par koi chhoti mismatch aa sakti hai, wo normal hai. Poora error message copy karke review karwana sabse tez fix ka tareeka hai.
